- * Article code: **S30.30.31.0056.xxx**

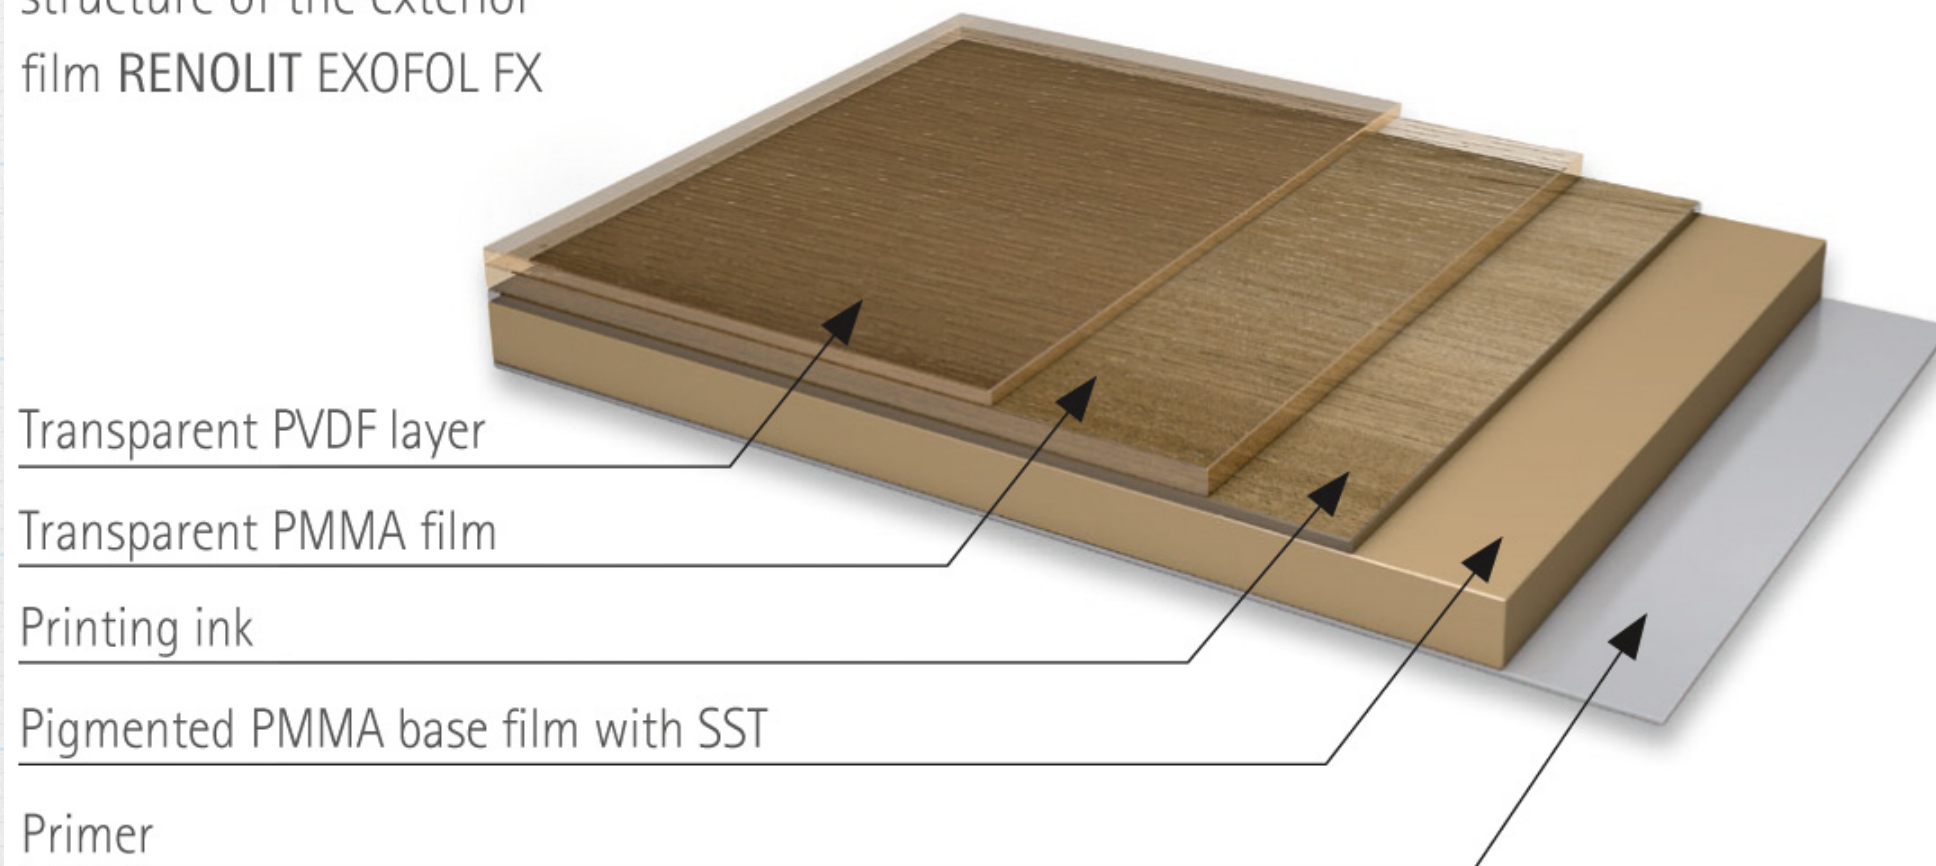

Details of Renolit Exofol FX Film Structure

RENOLIT EXOFOL FX is a multi-layer film with an overall thickness of 170 – 180 μm . The top layer consists of a polyvinylidene fluoride film (PVDF), the second is transparent polymethylmethacrylate (PMMA) and the base layer is a solid colour PMMA.

The base layer contains Solar Shield Technology (SST), to further decrease heat build-up of the film and the laminated components.

Properties of Renolit Exofol FX Film

RENOLIT EXOFOL FX is weather and ultraviolet resistant. This high-performance material retains its gloss throughout its service life. In addition, the film's low surface tension makes it inherently dirt-repellent and therefore easy to clean.

Even graffiti can easily be removed with a special cleaner.

The easy-to-clean effect of **RENOLIT EXOFOL FX** allows it to be used for new applications such as façades on high-rise buildings.

Because of Solar Shield Technology, **RENOLIT EXOFOL FX** protects profiles against excessive heat build-up.
